

WICKED

FOR GOOD

IN THEATERS NOVEMBER 21

GREEN-IFY YOUR COMMUNITY

Caring for nature helps the planet and ourselves. Gather your friends to plant a pollinator garden, green a schoolyard with native plants, or care for a local park.

Together, we can grow thriving communities, for good.

EXPLORE WAYS TO GREEN-IFY THE PLACES WE SHARE

1. JOIN A COMMUNITY CLEAN-UP

Grab some friends (and gloves) to help restore the beauty of local spaces we all share. Find a park or beach clean-up or organize your own event to keep nature in your community thriving.

2. CARE FOR OUR TREES

Trees play a powerful role in our cities. They provide shade to cool our homes, improve air quality, shelter wildlife, and absorb carbon to produce oxygen – like magic! Planting and nurturing trees is one of the most powerful actions we can take for our communities and the environment. Find local volunteer opportunities to plant and care for our trees.

3. PLANT A POLLINATOR GARDEN

Did you know that pollinators—including bees, butterflies, and certain birds—are vital to both nature and our food supply? **Nearly 90 percent of flowering plants and more than three-quarters of staple crops** rely on them. Help bees, butterflies and birds thrive by planting native flowers in your yard, balcony or shared spaces. Find local plant guides and check out **Bee:wild** to protect our pollinators.

4. GREEN-IFY YOUR SCHOOL OR CAMPUS

Let's work together to transform schoolyards into greener, healthier places to learn! Programs like **Re:wild Your Campus** equip students, community volunteers, and groundskeepers to shift to organic land care, creating green spaces. Sign up **here** to get your school involved.
